

OGGM-Edu: an interactive online platform to learn about glaciers

Fabien Maussion, Zora Schirmeister, Patrick Schmitt

University of Innsbruck, Department of Atmospheric and Cryospheric Sciences, Innsbruck,
Austria

In this presentation, we will introduce OGGM-Edu (<https://edu.oggm.org>), a platform offering interactive tools to learn about glaciers and their relation to climate. Based on three pillars (open-source graphics, interactive online applications, and interactive online computational notebooks), the platform is aiming at offering teaching materials for school and university teachers interested in offering classes and workshops about glaciers. After a presentation of the educational tools, we will explain how they work "behind the scenes", so that other interested research teams can apply them to their own outreach projects.
