

Dear Colleagues,

A quick update on behalf of the International Symposium on Anaerobic Microbiology (ISAM)!

This year we can look back at a successful ISAMonline 2021 conference with over 40 researchers of twelve different nations and once again would like to thank all participants and speakers for these two days filled with fruitful discussions and keeping the network of anaerobic microbiology thriving under these exceptional conditions!

The strength and basic idea of the ISAM series is to bring established researchers and early career scientists closely together and allow for extensive scientific exchange in a relaxed atmosphere. It is therefore important for us to organize this symposium as face to face event. The fourth wave of the covid-19 pandemic and the onset of the omicron wave forces us again to reschedule the 12th ISAM conference, that was planned for March 2022.

We would thus like to announce the new dates of the 12th ISAM (ISAM2023)

May 23rd – 26th 2023

This way we preserve the biannual character of the ISAM series. More details will be communicated over the website (<https://www.uibk.ac.at/congress/isam2023>) and you can reach the ISAM network any time under (isam-microbiology@uibk.ac.at).

Looking forward to meeting you in Innsbruck, Austria

Best wishes from the organizing committee,

Sabine Podmirseg
Heribert Insam
Andreas Wagner
