There are 3 different types of presentations: external econ (E), external stats (S), internal (I). Internal presentations should serve as a platform for faculty members and, in particular, junior faculty and PhD-students to be present their empirical research in a supportive environment. You can present your research at any stage (i.e., i. research idea, ii. work in progress, and iii. working paper). The type of presentation will be announced to adjust the audiences' expectations. These presentations should foster scholarly communication and/or help (junior) researchers to improve (the presentation of) their research. In the case of the presentation of research ideas, the presentations may help to re-formulate ideas or even to 'kill' bad ideas. Presentations should not exceed 45 minutes including discussion. Please contact us via email if you want to schedule a presentation. All presentations will be in english.
