Curriculum for the
Bachelor's Programme in Italian
at the Faculty of Humanities 2, University of Innsbruck

§ 1 Profile and programme objectives

- (1) The Bachelor's Programme in Italian is grouped among the Humanities and Cultural Sciences.
- (2) Educational objective: The primary objective of the Bachelor's Programme in Italian is to convey excellent active Italian language skills. The study programme imparts in-depth knowledge of the language in terms of structures, functions and use, its history as well as varieties. Moreover, it introduces Italian literature and literary analysis and conveys basic knowledge of cultural, historical, political, economic, social and gender aspects.
- (3) Qualification profile: The Bachelor's Programme in Italian offers a wide range of career opportunities due to its subject-related and methodical competences. In training future specialists in Italian, apart from the transfer of profound expert knowledge and active written and oral language skills, the study programme emphasises on the development of key qualifications guaranteeing intellectual openness and methodical flexibility for practicing rapidly changing job profiles.

1. Subject-specific skills

- a) Language-practical skills: The language training within the curriculum is focused on the guidelines of the Common European Frame of Reference: Learning, Teaching, Assessment (CEFR) (target level C1 based on CEFR). Based on the level of competences, suitable descriptors on CEFR have been developed for the individual curricular language proficiency courses. The descriptors help to explicitly determine the teaching and learning objectives for a foreign language, in addition to the base level. The objective of university language teaching in the field of skills and competences is sophisticated language proficiency which is oriented towards the descriptions on CEFR. University language skills features the command of the four skills in listening, speaking, reading and writing which are prerequisites for communicative skills, intercultural action and examination with texts and which are to be transferred in an integrated form. Oral and written language competence is to be developed and extended systematically and progressively in fields such as text reception, text production, special languages and transmission (mediation) in order to correspond to scientific and vocational education.
- b) Linguistic skills: These are the competences which acquire students by the synchronous and diachronic study of the structures and functions of the different fields of language in general and the foreign language studied in particular. Graduates of the Bachelor's Programme in Italian are able to analyse language on a system-linguistic basis and to reflect their situation-specific use (pragmatics, sociolinguistics). They understand the Italian language as a result of a varied historical development process. Due to their studies, graduates are able to apply the knowledge and skills acquired in terms of specific tasks.

- c) **Literary skills:** These are the competences which enable a critically use of literary texts of the Italian language and cultural area, whereas the term „literary“ is broadly defined and thus also includes film, audio drama, comics or text music (e.g. musicals). Literary skills result from a differentiated language comprehension and also from a detailed knowledge of production conditions, historical-social contexts and traditions of literary work. These competences also include the ability to deal with the theories of literary consideration and to use literary methods exemplary and apply them to the analysis of concrete literary and non-literary texts.
 - d) **Cultural-scientific skills:** These competences result from the acquisition of knowledge in terms of the cultural, political, social, economic and gender-specific context of the Italian language in past and present. They also exist in the competence to critically deal with the issues concerning these language areas and to elaborate associated subjects according to scientific criteria.
 - e) **Culture skills:** This includes the competence to identify, define and describe the geographical, economic, historical, ethnic-religious, political, socio-cultural and gender-specific facts of the Italian culture and language. Students are aware of the varied conditions of the Italian culture in comparison to their own culture, which leads to a norm- and convention-appropriate behaviour in the foreign culture area.
 - f) **Intercultural skills:** This is the competence to analyse and shape cultural interaction processes. The constant confrontation with socio-cultural realities of the Italian language area during the study programme results in the practice to equally deal with the context of one's own and also the foreign culture and to flexibly consider the different views and traditions of thinking. This implies open-mindedness and tolerance.
 - g) **Basic and orientation knowledge:** The study programme conveys basic knowledge of cultural science (methods, subjects and objectives) and familiarity with basic issues (concept of culture, culture-theoretical approaches). It enables to understand the culture-scientific dimension of the special studies in its historical relativity and actuality.
 - h) **Media skills:** It features acquaintance with culture-scientific important text sorts and media (from the fields of literature, functional literature, popular culture, film, theatre, music, print and digital media) as well as knowledge in the use of media in general and media of the French-speaking target culture. Media skills also corresponds theoretical-methodical competence in the field of inter-media contexts, in particular with regard to the relationships between literature and other art forms as well as in the field of different medial expression forms of discursive phenomena (e.g. text, image, sound).
2. **Key qualifications and soft skills:** These are qualifications which students acquire in addition to their subject-specific competences and which qualify them to undertake vocational tasks in different occupational fields. Special emphasis is to be given to:
- a) **Written and oral expression:** Students have to write various works in the foreign language, give presentations in courses and discuss work results. In this context, they also learn to present different contents, to outline complex issues in a comprehensive and convincing manner, to defend their own point of view, to criticize other views, to ask specific questions, and to give precise answers. One of the key qualifications is thus communicative competence in Italian and their mother tongue.
 - b) **The ability to clear rigid thought patterns by thinking in alternative ways and to be open for unconventional and creative solutions:** Intense critically reflected dealing with specialist literature and different doctrines is particularly suitable for developing this ability.
 - c) **Systematic approach to new tasks:** In linguistics, literature and cultural science, texts are subject to a scientific analysis. The tasks for the students are not only the dealing with relevant theories but also the elaboration of individual, problem-related theoretical approaches. In this context, students learn to specifically and individually solve problems and critically deal with individual solution strategies.

- d) **Thinking in contexts:** By linking the subjects of Italian with other science fields and neighbouring disciplines, students are able to think in contexts and to consider several aspects of the tasks to be accomplished.
 - e) **Independence:** During their studies, students are supposed to find information and acquire knowledge autonomously. Independent scientific work requires and promotes the ability to organize one's own work efficiently and to accomplish it proactively.
 - f) **Intercultural and cross-cultural skills:** Students of the Bachelor's Programme in Italian are constantly confronted with the socio-cultural reality of the Italian language area. They are able to appropriately deal with other cultures and to understand and interpret their cultural processes and products adequately, which implies open-mindedness and tolerance.
 - g) **Team skills:** they are in particular developed and promoted in the context of the course type project seminar but also in other course types by implementing work tasks in group works.
- (4) **Occupational profiles and career opportunities:** The subject-specific skills and the key qualifications developed within this study programme guarantees a wide range of occupational fields with different job profiles.
