

## Thin Film Technology

Dr.rer.nat Georg Norbert Strauss; Prof. Dr. Hans K. Pulker

The Thin Film Technology group is working on problems concerning the deposition of thin coatings of mainly chemical compounds like metal oxides, nitrides, oxynitrides and also metal fluorides onto various substrates. Single films and multilayers are deposited mainly on glass and afterwards optically as well as mechanically characterized carefully. The studied thin films are applied in the fields of optics, medicine and tribology.
