Dear Dr Askey, dear Sue! This is an example of an interactive 3D generated from magnetic resonance datasets of our mushroom we examined. You need to have an Adobe Acrobat Reader Version 7 or newer. You have many possibilities to play around: You can zoom in and out, you can rotate, you can change the color, lights and even choose various render types. This tool could be of value for those who are dealing with complex molecules or structures.

Have fun! Wolfgang
