Course Description:

Technologies of Struggle: Transformations, translations and tensions

This course shines light on contemporary struggles for social justice through attending to the interconnections between the digital, the social, and the cultural – what we refer to as 'technocultural assemblages'. In the course, we focus on three contemporary struggles involving different digital technologies and illuminate the overlaps and varieties that characterize these pluralist modes of collective action. This course offers in-depth and case-based lectures from the teacher's ongoing research, exploring these issues from different theoretical perspectives and with an interdisciplinary lens.

Highlighting the emergent possibilities and risks of precarious subjects and struggles in digital times, this course provides theoretical approaches and conceptual tools for capturing the diverse effects of digital platforms as carriers of contemporary struggles and of the translations and tensions that may appear as a result. Through the three days of the course, lectures and workshop sessions will highlight grassroots struggles for algorithmic agency and responsibility, bring forth the ambient affiliation and visual grammar of feminist struggles shifting contexts and drifting across platforms, and demonstrate if and how struggles against online hate can be upscaled through AI crowdsourcing. Taking a socio-technical approach to critically scrutinize the significance of digital technologies in contemporary struggles, this course does attend not only to the impact of digital technologies on social justice struggles, but also to the influence of struggles on digital technologies, platforms, and vernaculars.

After the course students should be able to:

Learning outcomes:

- Describe and explain core constructs related to technocultural assemblages
- Apply a socio-technical approach to understand technologies of struggles
- Situate the implications of digital technologies in different contexts of contemporary struggles
