
EXAMPLE ABSTRACT FOR 12TH AUSTRIAN NUMERICAL ANALYSIS
DAY

Jane Doe (University of Exampleton)
My Name* (My affiliation, My country)
John Other-Coauthor (Example State University)

This is an example abstract to illustrate the use of the abstract class. The packages `theorem`, `amsmath`, `amssymb` and `graphicx` are automatically included in the `lfu_na_a.cls` class file. Please put the class file in the same directory as your abstract files. Preferably use pdf- \LaTeX to process the files. The length of your abstract must not exceed one page. Furthermore, we ask you to refrain from redefining standard \LaTeX commands as we will use your abstract directly to compile the Book of Abstracts.

You can use the `\cite` command to include references as [1]. Please use your name together with a number as label.
