Areas of research and current and future research projects

My research is concerned with the various ways in which notions of performance and risk are established, communicated, acquired and acted upon within and between organizations. I am particularly interested in the ways in which people and organizations, through various representational practices such as setting of performance targets and standards of ‘good practice’, forecasting and risk mapping, make up, intervene in, and are affected by uncertainties related to complex interactions, high hazards, crises and organizational and societal change.

I investigate risk and performance management as social and organizational practices. This implies 1) looking at the social and organizational conditions that allow some technologies to become regarded as appropriate and functional, 2) taking into account a broader set of roles besides often espoused intentions of ‘better’, rational management that these managerial technologies may take on in organizations and society, and 3) regarding different roles as co-emerging with the social relations that these technologies help make possible. Against this background, my research builds upon the understanding that (notions of) performance and risk are not simply ‘captured’, but are constructed and shaped by the ways in which they are represented and communicated.

In order to make sense of the interaction between risk and performance management technologies and their organizational and social context, I draw in my research upon various concepts and approaches in organization studies, social psychology, sociology, linguistics, and historical and political sciences that share an interest in the constitutive character of communicative and representational practices. As such, my research is situated in the field of interpretative and critical accounting and organization studies.

I am currently engaged in three research projects, where I investigate together with my colleagues 1) the interplay between programmes, technologies and fields of expertise in neoliberal health care reforms concerned with healthcare quality assessment (together with Albrecht Becker, Michael Wörndle and Patrick Neff), 2) the role of numbers in social media debates (together with Hermann Mitterhofer, Innsbruck University, and Andrea Mennicken, London School of Economics), and 3) the role of Islamic management practices in performance measurement practices in Iranian public management (together with Siamak Nejadosseini Soudani, ESCP London).
