Learning Outcomes <p>Graduates of the micro-credential “Climate Action & Sustainability Communication” can describe the basics, current research results and approaches to climate protection. They can identify connections between human action, personal decision-making and agency, and pressing local and global challenges, and describe examples of how human action influences the natural and antropogenic world. They are able to describe their own strengths and weaknesses (integrative learning: reflection and self-assessment).</p> <p>Graduates of the micro-credential are able to communicate the relevance, actuality, authority and usefulness (information literacy) of their own work in the context of oral sustainability communication or science communication in the broader sense to specific target groups and use techniques that make their presentation understandable and interesting (oral/integrative communication).</p> <p>Graduates of the micro-credential are able to constructively build on the contributions of others in interdisciplinary and international teams, synthesise diverse contributions to find solutions, provide constructive feedback and support other team members in fulfilling their tasks (teamwork).</p>
