

# Biokybernetik und Bionik

## Research-related Question that will be addressed:

- How can structure & function of life nature be transferred to technology and future sustainable products
- How can cognition physiology be transferred to health products and strategies

## Methods used:

- Design of sensors for measurement (signal analysis)
- Work with structure & function databases
- Programming Analysis Systems (for beginners)
- Bioinspired Design Thinking: Problem – Nature – Rapid Prototyping - Product
