## Canon Configuration on macOS

1. Download and Install the driver from the Canon website

https://www.canon-europe.com/support/products/imagerunner/imagerunner-advancedx-c5840i.html?type=drivers&language=en&os=all

Select your macOS operating system in the dropdown menu and download the UFR II/ UFRII LT Printer Driver & Utilities for Macintosh.

- 2. Create a new Printer in the System Preferences' Printer Pane
- 3. (The symbol might not be there yet. In this case right-click the toolbar, choose "Customize toolbar…" and drag it into the toolbar.) Select the "Advanced"-tab and enter the information shown below
