

## LIST OF POSTERS

Briegel, Karl	<i>Wide field of view quantum sensing using NV-centers in diamond</i>
Fiderer, Lukas	<i>Cost-benefit trade-offs of learning - Towards a thermodynamic perspective</i>
Flamini, Fulvio	<i>Projective Simulation with single-photon quantum walks in linear optical interferometers</i>
Gyurik, Casper	<i>Towards quantum advantage from topological data analysis</i>
Hamann, Arne	<i>Noise canceling in quantum sensor networks</i>
Jerbi, Sofiene	<i>Unifying quantum machine learning models: theory and practical implications</i>
Krumm, Marius	<i>Noise reduction in variational quantum computations via superposition of trajectories of inputs</i>
van Lier, Maud	<i>Interdisciplinary collaboration &amp; the schematic visualization of artificial agency</i>
Melnikov, Alexey	<i>Hybrid quantum neural networks</i>
Muñoz-Gil, Gorka	<i>Understanding optimal strategies in real-world scenarios via reinforcement learning</i>
Smith, Isaac	<i>A quantum causal perspective of measurement-based quantum computation</i>
Stengele, Sebastian, Reinhart, Tobias, Gonda, Tomáš	<i>A categorical framework for universality</i>
Trenkwalder, Lea	<i>Automated gadget discovery in science</i>
Wölk, Sabine	<i>A quantum enhanced learning agent in action</i>
